

EDGE SOLUTIONS GUYANA

PROFILE

Edge Solutions Guyana is an Energy Consulting company based in Trinidad and Guyana. Our Marine and Energy Consulting Company is founded by professionals with experience in a variety of fields relevant to the Oil and Gas Industry.

We are committed to providing an efficient, industry standard Health, Safety and Environment work place for our employees, while maintaining a high level of service quality and service delivery to our customers. Our operations are conducted with strict cost control, in an ethical business manner in line with industry standards. We understand what it takes and remain highly committed to the quality, consistency and excellence in execution demanded by the Energy Sector. Our services include

SERVICES

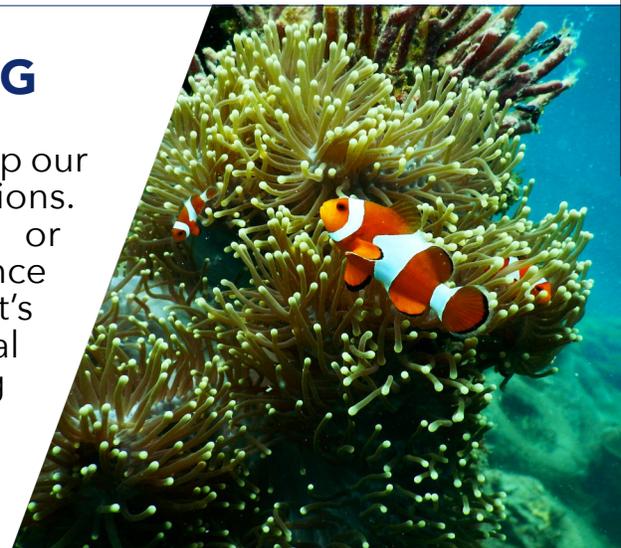

OFFSHORE MARINE VESSEL SUPPORT

We partner with our customer to meet their operational requirements by offering oversight and consultancy services to ensure innovative, resilient and cost effective operations. We provide ship agency services, custom brokerage and other customs related formalities, procurement services if required by our customers, recruitment to meet the specific need of the client for both local and international personnel and special offshore light maintenance and construction projects.

Through our Global partnerships and alliances, we have access to new and almost new offshore supply vessels to meet our customers technical and operational requirements. These vessels can be provided on medium to long term depending on our client's operational needs. Due to our ready access to offshore supply vessels, we can provide Chandlery services to stacked Semi-submersibles and Drill-ships moored offshore or in international waters.

MARINE ENVIRONMENTAL CONSULTING

With our knowledge of the oil and gas sector, we can help our client's project meet and exceed environmental regulations. Whether coordinating environmental assessments or liaising with community stakeholders, our experience ensures the success of your oil and gas project's environmental program. We provide environmental impact assessments, and environmental monitoring programs. We can also provide Environmental reviews and quality management audits and remote sensing for monitoring and assessment.

SERVICES

PROJECT ENGINEERING

Assist clients to analyze and identify where technical problems may occur within the client's operation (subsurface, reservoir) and work to develop practical and cost-effective solutions to improve production and reservoir management. Develop project plans including engineering design and procurement, fabrication, vendor mobilization, offshore construction, and commissioning. Manage the communication between all parties involved in a project, including management and technical staff.

PROJECT MANAGEMENT

ESG is well positioned to source and provide the appropriate technical personnel to create a project team that can execute any range of projects specified by the client (surface, subsurface, pipeline, etc.). This team will be vetted by ESG and approved by the client. Once the team is put together, it can operate in-house at the client's facility or offsite at an alternate office location. The team will initiate, execute, control and close out the project to achieve the specific goals and meet the success criteria stipulated by the client.
